

 Internship (3 – 6 months, 60 – 100%)

 starting now / by arrangement

 Aarau

## What you will be doing

As our first inhouse software developer you will play an important role in the development of our investment app and our young fintech startup in general and have an impact from day one.

We have a pipeline of interesting and important business projects, ranging from developing our investment algorithm over to automate the data import into our back end, for which we need innovative, high-quality software applications. You will have the autonomy to design and implement great applications and services, enjoying creating something end to end.

You will play the leading role in digitizing and automating our business processes and therefore preparing our startup for accelerated business growth.

You will be

- developing software applications for the digitalization and automation of our business processes
- responsible for data analysis and building an automated reporting system
- working on the further development of our app (design, functionality and front/back end coding – depending on your knowhow) together with our app development partner
- working in all areas of our startup and thus gaining comprehensive insights

## This is you

- You want to actively contribute to our startup
- You are able to work autonomously and have a self-starter attitude
- You have extensive experience with Python (or similar language)
- You are familiar with PostgreSQL or other relational databases
- You have a good understanding of REST APIs and XML
- You might have experience with Django-Framework, VueJS, JavaScript, HTML and CSS (would be a plus)
- You are proactive and have a high willingness to learn and adapt
- We speak English and German. Fluency in English is a must, German is a plus.

## What we offer

- A motivated and passionate team who puts the customers at the center of their work
- Short decision-making paths and almost no hierarchies, which allow you to contribute your own ideas and quickly execute on your projects
- A flexible and dynamic working environment with supportive colleagues
- A fast-paced learning path, where you will be learning, growing and developing professionally on a daily basis
- 25 days holidays, plus 9 public holidays on top

After successful completion of your internship, you will have the opportunity to take over the permanent position as our leading developer and join our founding team.

## About findependent

We are a young Swiss fintech startup, currently consisting of two people, on a mission to help people save cleverer with an investment solution and educate them about the workings and enormous benefits of long-term investing.

With our investment app, the first version of which we have just launched in June, we help people reach their financial goals faster and easier and learn about investing.

We are still small and only at the beginning of our promising journey, so you will truly contribute to our progress and shape the direction of our startup. During the next months we will further develop our investment app, prepare our product for scaling, build a founding team and pitch for money from institutional investors.

If you want to make an impact during your internship and take the tech part of our fintech startup decisively forward, we are looking forward to get to know you!

Please send us your application (including CV and a short motivation letter) to

Matthias Bryner, [matthias.bryner@findependent.ch](mailto:matthias.bryner@findependent.ch)
